

Explanation of the Columns in the Technology Architecture Measurements Dataset

- Date = date of client interaction measurement
- Location = location of client
- IP address = IP address of the client
- Component = the primary component that was interacted with by the client
- Interaction = the interaction from the client with the component
- Duration = the reported time in seconds that the client interacted with the component for
- Downtime = the reported time in seconds that this interaction by the client caused in system downtime. Downtime is the amount of time that this component has been deemed unusable or vulnerable to a hack, malicious damage or threat
